DECISION PAPER

Procure-to-pay: build, buy or partner?

How the ready-made market solves what our FMS is trying to solve, who does it best, and what makes most sense for Autopilot Offices.

Prepared 27 October 2026 for the founders.
Built from public sources read on 27 October 2026, and from a check of our own code on the same day.
Every fact is marked ✓ (stated on an official page that was read) or ⚑ (vendor marketing, third-party estimate, or not independently confirmed).
Not included: Reddit and forum threads, and G2, Capterra and Gartner reviews. They were blocked to the tools used. See page 12.

1. The answer

> **Neither pure build nor pure buy. Keep the FMS as the control layer, and partner for the three regulated edges: books, GST and payments.**
>
> Nobody in the market covers our whole chain. Nobody we found does WhatsApp-first PO approval, invoice-against-PO matching and staged payments together, with Tally and Zoho Books behind it. That middle is where the FMS is already ahead of what we found. The edges are where it is weak, and where specialists are strong.

Why this answer

- **The middle is ours to keep.** Of the products read, none was confirmed to do WhatsApp approval of a PO ⚑. Zoho's approvals page describes the web only ✓, with no mobile or WhatsApp mentioned. Vendors uploading invoices against a PO is still a request on Zoho's community forum ⚑. Meta does allow approve and reject buttons on WhatsApp ✓, so this is buildable, and we have built most of it.
- **The edges are not our business to build.** The FMS has no Tally link, no GSTR-2B or ITC reconciliation, no e-invoice (IRN) check, no TDS logic, and no bank payout connection (code check, 27 Oct). These are regulated, change often, and specialists sell them. Tally is already moving here: its AI reads invoices into draft vouchers (Aug 2026) ✓.
- **The big suites are the wrong size.** Third-party estimates put Zycus near $120,000 a year, Zip near $82,000 a year, Coupa above $100,000 ⚑. None showed Zoho Books or WhatsApp on the pages read, and only Procol names Tally. Precoro is affordable ($499 to $999 a month ✓) but lists no Tally, Zoho Books or India support ✓.
- **One product is worth a demo before we decide.** Mysa, a Bengaluru AP product, claims 3-way matching, approvals, GSTIN and TDS checks, and Zoho Books and Tally links ⚑. Its price is not public, and its own site mentions WhatsApp only for payment advice, while a blog it wrote says WhatsApp intake ⚑. That conflict is exactly what a demo settles.
- **Reading invoices is no longer a moat for anyone.** General AI models now score level with the specialist in the specialist's own benchmark ⚑. Our reader costs about $0.0001 per text invoice (one measured test) against $0.16 per invoice at Veryfi ✓. Buying OCR does not make sense. Proving ours on real invoices does.

What to do next (four tests, about two weeks)

1. Mysa demo on 20 of our real vendor invoices. Does it take them from WhatsApp, match them to our POs, and push to Tally?
2. Ask Tally whether our serial number qualifies for TallyIra, and for its price.
3. Run 50 real GST invoices through our reader and through one or two free document-AI tiers. Compare accuracy.
4. Ask RazorpayX and Open for a two-way Tally sync demo that returns the UTR (bank reference) into the books.

Confidence: medium. It would turn to "adopt a product as the AP layer" if the Mysa demo passes on our invoices at a fair price. It would turn to "build more ourselves" if every partner fails the Tally and GST tests. Page 11 has the tests and pass marks.

2. The problem we are solving

In one sentence: a purchase passes through five tools and four people before it is paid and booked, and nothing shows in one place where a PO stands, why it is stuck, or whether the vendor's invoice agrees with it.

PO raised	Approved	Vendor told	Invoice arrives	Checked	Paid in stages	Booked
Purchase, in Zoho Books	Founders	WhatsApp	link, mail, WhatsApp	against the PO	advance, milestone, balance	Tally, budget sheet

Source for the chain: our own process and the founders' call on invoice rules (invoice within 3 days of payment, no payment without an invoice, GST portal check per vendor, ITC against 2B, Tally booking).

What "good" looks like, in plain words

#	Requirement	What it means for us
R1	Approve a PO from a phone	A founder approves or rejects from WhatsApp or mobile, with the context in front of them.
R2	Invoice intake	The vendor sends the invoice by link, WhatsApp or email. Nobody retypes it.
R3	Invoice reading	Indian GST invoices, scans and photos, line by line.
R4	Matching and exceptions	Invoice against PO (2-way) and against goods received (3-way). A clear reason when it does not agree.
R5	Staged payments	Advance, milestone and balance follow the PO's own terms.
R6	Books sync	Tally and Zoho Books stay correct without double entry.
R7	India compliance	GSTIN checks, GSTR-2B and ITC, e-invoice (IRN), TDS.
R8	WhatsApp and email	Vendors and approvers are reached where they already are.
R9	Payments	Bank payout and the UTR coming back.
R10	Sites and budget	Cost lands on the right site and feeds the monthly budget-versus-actual.
R11	Audit and access	Who did what, when. Roles are respected.
R12	Open to AI and APIs	APIs, webhooks, and an MCP server so an assistant can act safely.

3. What we have today

Checked in our own code and tests on 27 October 2026. "Working" means it runs and is tested. It does not mean it has been proven on a large volume of real vendor invoices.

Capability	State	What exists, and the honest limit
PO approval (R1)	Built, unproven	An approvals screen for the two founders, each linking their own Zoho account so Zoho records their name. Approve, reject, or ask Purchase a question. **Not yet switched on:** its database step is unapplied and no Zoho link has been made. Nothing on WhatsApp reply buttons yet.
Vendor invoice intake (R2)	Partial	A single-use vendor upload link, and Purchase can attach an invoice from the PO page. **No WhatsApp or email intake yet.**
Invoice reading (R3)	Works, thin proof	Text PDFs and scans, through two Engy models. Tested on synthetic invoices and 3 test PDFs. One scanned GSTIN was misread. About $0.0001 per text invoice, one measurement. **Not yet run on a batch of real vendor invoices.**
Matching (R4)	2-way only	13 kinds of check (vendor and GSTIN, duplicates, totals, tax, rate, quantity, PO balance, line mapping). Plain-English reasons. Fast-track exceptions with approval limits. **No 3-way:** "goods received" is only a document slot on the PO.
Staged payments (R5)	Working	Payment plan read from the PO's own terms, milestones Purchase can mark due, tranches aligned to Accounts, UTR recorded. No product we read does this.
Books sync (R6)	Zoho only	Zoho Books POs and lines sync in. **No Tally connection.**
India compliance (R7)	Mostly missing	GSTIN compared with the vendor's record. **No GSTR-2B or ITC, no e-invoice (IRN) check, no TDS logic** (it is only an amount field), no GST portal lookup.
WhatsApp and email (R8)	Outbound	Approved-PO message with the PDF to the vendor, through AiSensy, switchable off, test or live. Email notices. **Nothing inbound for invoices.**
Payments (R9)	File only	A corporate bank payout file can be exported, and UTRs are recorded by hand. **No bank payout connection** and no automatic UTR return.
Sites and budget (R10)	Partial	An AOP budget tracker and a "bounty" that chases missing figures. Site mapping decisions are still open.
Audit and access (R11)	Working	Append-only logs for invoices and approvals, role checks on every route.
Open to AI (R12)	Planned	About 570 API routes. An MCP plan exists (founders only); nothing built yet.

Also in place: a 105-test automated check on the invoice area, a PO approval watcher, an org wiki, and ticketing and CRM. The real cost of owning all this is people and time. That is not priced in this paper, because we cannot price it honestly from the code.

4. The market, in layers

Our chain is not one product anywhere. The market is split into layers, and different companies lead each one. The question "who performs best" has a different answer per layer.

Layer	Who is expected to own it	Best evidence found	Verdict
Decide approve a PO, judge exceptions, from a phone	Zoho Books, Precoro, Procurify, enterprise suites	Zoho's approvals page describes the web only ✓. Precoro has a mobile app, no WhatsApp ✓. No product found with WhatsApp approval ⚑.	**Open field.** Our strongest chance to lead. Meta supports the buttons ✓.
Intake invoices from vendors	Zoho vendor portal, Mysa, document-AI tools	Zoho's vendor portal lets vendors accept or decline POs (Premium plan) ✓. Invoice upload against a PO is still a Zoho community request ⚑. Mysa claims WhatsApp, email and Slack ⚑.	**Contested.** Mysa is the one to test.
Read and match OCR, PO match	Nanonets, Docsumo, Rossum, Veryfi, Precoro, Tally's TallyIra	None of the document-AI pages read mention Tally, Zoho Books, WhatsApp or GSTR-2B ✓. In the vendor's own benchmark, general AI models score level with the specialist ⚑. TallyIra reads invoices but does not match to a PO ✓.	**Commodity.** We should read our own and prove it.
Comply GST, 2B, ITC, e-invoice, TDS	ClearTax, Mysa, ERPNext, Odoo, SAP Ariba	ClearTax: GSTR-2B against purchase register, ITC claim ✓. ERPNext lists GST, e-invoice, e-way bill, TDS ✓. Ariba validates the e-invoice IRN, with listed limits ✓.	**Specialists win.** Do not build 2B or IRN.
Pay bank payout, UTR	RazorpayX, Open, Mysa's partner banks	RazorpayX pays by IMPS, NEFT, RTGS and UPI ✓, syncs one way to Zoho Books ✓. Open claims two-way Tally and Zoho Books sync ⚑. Prices not public.	**Specialists win.** Use their APIs, not custom banking.
Book Tally, Zoho Books	Tally, Zoho	Both are incumbents. Tally now has AI invoice reading and WhatsApp sharing through a partner ✓. Zoho has an official MCP server ✓. Tally has none (community only) ⚑.	**Incumbents stay.** Connect, do not replace.

Who is performing better? Nobody overall, because nobody does all six layers for a company shaped like ours. Per layer: books, Zoho and Tally (they are the incumbents). Payouts, RazorpayX and Open (claims, pricing hidden). GST reconciliation, ClearTax. Reading invoices, general AI models, which we already use. Deciding and orchestrating from WhatsApp, no one yet. That last layer is the part of the market we are already building into.

5. Scorecard against our twelve needs

● stated on the product's own page (a claim until a demo proves it; for the FMS it means works in code) ◐ partly, or only in marketing or third-party text
○ the page lists what it supports and this is not there – not shown in anything we read. A dash is not a no.

Need	FMS (ours)	Zoho Books	Tally + TallyIra	RazorpayX / Open	Mysa	Precoro	ERPNext / Odoo
R1 Approve from a phone	◐	◐	–	◐	◐	◐	–
R2 Invoice intake: link, WhatsApp, mail	◐	◐	◐	◐	◐	◐	–
R3 Invoice reading	◐	–	●	–	●	◐	–
R4 Match to PO and goods receipt	◐	–	◐	–	●	●	–
R5 Staged payments from PO terms	●	–	–	–	–	–	–
R6 Tally and Zoho Books sync	◐	◐	◐	◐	●	○	◐
R7 GST, 2B/ITC, IRN, TDS	◐	◐	◐	–	◐	–	◐
R8 WhatsApp and email, native	◐	◐	◐	–	◐	◐	–
R9 Payments and UTR	◐	◐	–	●	◐	–	–
R10 Sites and budget vs actual	◐	–	–	–	–	◐	–
R11 Audit and roles	●	–	–	–	●	–	–
R12 APIs, webhooks, MCP	◐	●	◐	●	–	●	◐

What sits behind the symbols

- **Zoho Books:** PO approval workflow ✓ (web only). Vendor portal from the Premium plan ✓. BillPay add-on for payments ✓. Official MCP server ✓, but its help page lists no PO or bill tools ✓. WhatsApp is through third-party connectors ⚑.
- **Tally + TallyIra:** reads PDF, JPEG or ZIP invoices into a *draft* purchase voucher, flags duplicates and GSTIN mismatches ✓. Does not match to a PO and describes no approval chain ✓. Phased rollout by serial number, TallyPrime 7.1, price not stated ✓ (article dated 6 Aug 2026). WhatsApp sharing runs through Interakt, one document per message ✓.
- **RazorpayX / Open:** RazorpayX syncs payouts one way into Zoho Books ✓; its payout pricing is not public ✓. Open pulls bills from Tally and Zoho Books for bulk payment and claims two-way Tally sync ⚑.
- **Mysa:** its own page lists 3-way PO and GRN matching, a validation agent for GSTIN, MSME status, bank details, GST, TDS and duplicates, and both Tally and Zoho Books ✓. No GSTR-2B mentioned ✓. WhatsApp is shown only for payment advice on its site ✓; a blog it wrote adds WhatsApp invoice intake ⚑. No price. "200+ customers" is its own figure ⚑.
- **Precoro:** $499 or $999 a month ✓; QuickBooks, Xero, NetSuite and others, but not Tally or Zoho Books ✓.
- **FMS R7:** compares GSTIN with the vendor record. It has no GSTR-2B, IRN, TDS logic or portal lookup, so ◐ is generous.

6. The candidates, one by one

Mysa — closest ready-made fit demo first

Bengaluru fintech launched 2025, for companies with roughly ₹10 to 500 crore revenue ⚑.

- Claims 3-way matching, approval routing by amount or department, 22+ validation checks, TDS, and a business account with partner banks ⚑.
- Integrations listed: Tally, Zoho Books, ERPNext, NetSuite, SAP ✓.
- Customers named are restaurants, D2C brands and startups. No facility operator is among the names it lists ✓.
- **Risks:** price hidden; WhatsApp intake conflicts between its site and its blog; no site-wise budget; would duplicate our Invoice Control; we would depend on a young company.

RazorpayX and Open — payouts partner

- RazorpayX: payouts by IMPS, NEFT, RTGS, UPI; IMPS up to ₹5 lakh, 24x7 ✓. Official MCP server ✓.
- Its Zoho Books sync is one way, and the docs do not mention the UTR coming back ✓.
- Open: bulk payouts from Tally and Zoho Books bills, approval workflows, plan quoted at ₹4,000 a month on annual billing, tier unclear ⚑.
- **Risk:** both are banking products. Moving money means moving our bank relationship.

TallyPrime and TallyIra — books connect

- The incumbent for our books. Its new AI turns an invoice into a draft voucher a person confirms ✓.
- It overlaps our reader, but writes straight into Tally, which is the step we lack.
- **Risk:** invitation-only rollout, no price, no PO matching, no approvals. We would still own the decision layer.

Zoho Books — what we already use

- INR plans from ₹749 to ₹7,999 a month on annual billing. PO approvals need Professional (₹1,499); the vendor portal needs Premium (₹2,999) ✓.
- Capterra 4.4 of 5 from about 673 reviews ⚑ (search snippet; page blocked).
- **Limit that matters:** approvals described for the web only ✓; vendor invoice upload against a PO is still a community request ⚑.

ClearTax — GST reconciliation partner

- GSTR-2B against the purchase register, ITC claim, discrepancy sharing with vendors ✓. Not a PO or payment tool.
- Price not public. One third-party figure of ₹40,000 for 300 GSTINs and 3,000 invoices a year ⚑.

Enterprise suites: Zycus, SAP Ariba, Coupa, Zip, Procol too big

- Prices are not public. Third-party estimates: Zycus about $120,000 a year plus 55 to 95% implementation fees on a 3-year term; Zip about $82,000 average contract; Coupa above $100,000; Ariba from $30,000 ⚑.
- Ariba is the only one with sourced India e-invoice (IRN) evidence ✓. Procol serves large Indian groups (Reliance, Tata, Havells) and names Tally once ✓, but shows no WhatsApp, GST or Zoho on its site ✓.
- "Pro5" in the brief turned out to be an AI recruiting site, so it was excluded.
- Two more India names turned up: TYASuite (PR, RFQ, PO and multi-level approvals with GST and MSME compliance; Capterra India 4.2 from 78 reviews) and Zoho Procurement (listed as US-only) ⚑. Neither was checked further.

ERPNext and Odoo — replace the stack? not now

- ERPNext's India Compliance app lists GST, e-invoice, e-way bill and TDS/TCS ✓. Odoo lists GST, e-invoice (via a GSP) and e-way bill ✓. Neither page names GSTR-2B.
- Using either means replacing Zoho Books and Tally and migrating history. No official MCP server for ERPNext; none shipped for Odoo yet ⚑.
- Odoo's prices conflict across sources (about ₹580 to ₹2,600 per user a month) ⚑.

6b. Other things we looked at

Document-AI products: should we buy our own OCR?

Product	Published price	India fit
Veryfi	Free to 100 documents a month; $500+ a month minimum; $0.16 per invoice ✓	No Tally, Zoho, GST or WhatsApp on its page ✓
Nanonets	$0.02 to $0.30 per step; "a typical invoice under $2 end to end" ✓ (vendor's own page)	Email intake only; no Tally, Zoho, GST or WhatsApp on its page ✓
Docsumo	Quote only; 14-day trial of 1,000 pages ✓. Mumbai-based ⚑	GST handling not confirmed anywhere we read
Rossum	Not public. About $18,000 a year ⚑ (third-party)	SAP, Coupa, NetSuite style integrations; no Tally or Zoho ✓
Mindee	About $0.05 per page credit; page numbers do not add up ✓	Not stated

Reading it ourselves. Our reader costs about $0.0001 per text invoice on one measured test, using a model on Engy listed at $0.045 per million input tokens ✓. Google lists Gemini 2.5 Flash at $0.30 input and $2.50 output per million tokens ✓. In the vendor-run Nanonets benchmark, Gemini 3.1 Pro (86.8) and GPT-5.4 (85.7) edge past Nanonets' own OCR-3 (84.3) on key-field extraction ⚑. Bias is likely, but it points the same way: general models are good enough that paying per document buys little. **No independent test on Indian GST invoices exists in what we found,** which is why test 3 on page 11 matters.

Facility-management platforms: Facilio, FMX, UpKeep

They are built around work orders and assets. Facilio's page lists purchase requests, approvals by order value, POs and invoice-to-PO matching ⚑, and a hosted MCP server is claimed without PO tools confirmed ⚑. FMX and UpKeep cover POs and approvals, with no sign of vendor invoices. None showed GST, Tally or e-invoice evidence, and no Indian FM-tech platform turned up. They would replace our operations stack, not complete our finance chain.

WhatsApp plumbing

- Meta charges per delivered message. The first 1,000 service messages a month per number are free, with charges after that from 1 Oct 2026. Indian accounts must be on INR billing by 31 Dec 2026 ✓.
- A message can carry up to three reply buttons, and the tap comes back with an ID. That is enough for Approve, Reject and Ask. A first message to someone outside a 24-hour window must be an approved template ✓.
- Provider fees (AiSensy, WATI, Interakt) are quoted at roughly ₹1,500 to ₹2,500 a month, but only by competitors' pages that disagree with each other ⚑.

Glue tools (Zoho Flow, Make, n8n, Power Automate)

Priced at roughly $10 to $40 a month ⚑, so cost is not the issue. The open questions, for which we found no evidence either way, are retries, audit trail and reading quality. They could move data between Zoho and WhatsApp; they would not give us the matching and the plain-English exception reasons.

7. What each route costs, as published

Prices are as stated on the page or by the source marked. Currencies are kept as published. Nothing is converted or totalled, because the products do different jobs.

Item	Published price	What it buys
Zoho Books Professional	₹1,499 a month, annual billing ✓	Approval workflows on POs and bills. 5 users.
Zoho Books Premium	₹2,999 a month, annual billing ✓	Adds the vendor portal. 10 users.
Zoho BillPay add-on	₹2,999 monthly or ₹3,499 annual, as worded ✓	Vendor onboarding and payment features.
Precoro	$499 (Core) or $999 (Automation) a month, annual ✓	Procurement and approvals. No Tally or Zoho Books.
Bill (Bill.com)	$49 to $89 per user per month ✓	US-centred AP. No Tally or Zoho Books on its page.
Veryfi	$0.16 per invoice; $500+ monthly minimum ✓	Invoice reading only.
Nanonets	Up to $0.30 per step; under $2 an invoice end to end ✓	Invoice reading and workflow steps.
Rossum	About $18,000 a year ⚑	Enterprise invoice reading.
Zycus / Zip / Coupa / Ariba	About $120,000 / $82,000 / $100,000+ / $30,000+ a year ⚑	Full procurement suites. Third-party estimates only.
Mysa, RazorpayX, TallyIra, ClearTax, Procol	Not public ✓	A quote or demo is the only way to learn the price.
Meta WhatsApp	Per delivered message; 1,000 free service messages a month ✓	The messages themselves. A provider fee sits on top.
Our reader (Engy)	$0.045 per million input tokens ✓; about $0.0001 per text invoice, one test ✓	Reading. Higher tiers up to $1.95 in / $9.75 out per million for hard judgement ✓.

The cost we cannot price: the people and time to keep the FMS running, patched and documented, and the risk if the person who knows a part leaves. Sources on build-versus-buy name exactly this as the main hidden cost, and say internal tools fail most often when the systems they connect to change ⚑. No source we found gave a hard total-cost figure, so this paper does not invent one.

8. The four routes, compared

Route	What it means	For	Against	Our view
A. Keep building it all	Add Tally, GST, IRN, TDS, payouts and WhatsApp intake ourselves.	Exact fit. Full control. Our data stays ours.	Regulated, shifting work with no end. Key-person risk. Every new rule is ours to chase.	Only for the middle
B. Buy a suite	Zycus, Ariba, Coupa, Zip, Procol, or Precoro.	Mature, supported, audited.	Large price estimates ⚑. Almost no Tally, Zoho or WhatsApp seen. Long rollout, and it replaces how Purchase works today.	No
C. Adopt an AP product as the base	Mysa, or RazorpayX with Open, runs invoices, compliance and payments. The FMS shrinks.	Compliance and payments come ready. Less to maintain.	Claims unproven for us. Price hidden. It would duplicate Invoice Control, lose the site budget feed and WhatsApp-first flow, and tie us to a young vendor.	Only if the demo passes
D. Hybrid	FMS keeps decide, intake, match, stage and budget. Partners supply Tally, GST and payouts through their APIs.	Keeps our edge. Hands off what is regulated. Each piece can be swapped.	Several vendors to manage. Integration work remains. Needs the tests below to pick partners.	Recommended

What to keep, what to partner

Capability	Decision	Why
Approve and decide, from WhatsApp or phone (R1)	**Keep and build**	Nobody found does it; it is our differentiator, and Meta supports it.
Staged payments from PO terms (R5)	**Keep**	Not seen in any product read.
Match and plain-English exceptions (R4)	**Keep**; add 3-way when goods-received data exists	Working today; the 3-way rule needs receipts we do not yet capture.
Reading invoices (R3)	**Keep**; prove on 50 real invoices	Cost is negligible; accuracy on GST invoices is the only open question.
WhatsApp and email intake (R2, R8)	**Build** (small), or use Mysa if it passes	A webhook feeding our own reader. Keep AiSensy or equivalent for sending.
Tally sync (R6)	**Partner**	TallyIra writes draft vouchers; Razorpay and Open claim two-way sync. Do not build blind.
GSTR-2B, ITC, IRN, TDS (R7)	**Partner**	Regulated and moving. Keep only the GSTIN check and a TDS flag.
Bank payouts and UTR (R9)	**Partner**	Use payout APIs. Never build banking rails.
Site budget (R10) and audit (R11)	**Keep**	Specific to us; already working.
AI and MCP (R12)	**Build**	Founders-only plan exists. Zoho and Razorpay already offer official MCP servers.

9. The four tests that settle it

Each test has a pass mark. The pass marks are **our suggestion**, not a standard. The founders should change them. Two weeks, in parallel.

#	Test	How	Pass mark (suggested)
1	**Mysa on our invoices**	Book a demo. Give them 20 real vendor invoices from two sites. Ask them to take them in from WhatsApp, link each to its PO, run approvals and push to Tally.	At least 18 of 20 read and linked correctly; WhatsApp intake shown live; Tally entry correct; a price the founders will carry. A fail on any of these means route D without Mysa.
2	**TallyIra access**	Ask Tally support whether our serial number qualifies, the price, and whether it can read from a WhatsApp number.	Eligible now, with a price. If waitlisted, plan Tally sync another way.
3	**Our reader on real GST invoices**	Run 50 real invoices through our reader and through two free tiers (Veryfi's 100 a month, Nanonets' $50 credit ✓). A person marks the key fields: number, date, GSTIN, taxable value, tax, total.	Ours at least 95% on the key fields and within 3 points of the best product. Otherwise add a second model or buy reading.
4	**Payout and UTR return**	Ask RazorpayX and Open to demonstrate a Tally and Zoho Books sync that brings the UTR back into the books.	UTR returns automatically; Tally entry matches; price per payout disclosed.

What we need from you

- Twenty to fifty real vendor invoices (PDF, photo, WhatsApp screenshot), each with the PO it belongs to.
- Who talks to Tally, Mysa, RazorpayX and Open. A founder or the accounts lead on the calls helps, because the answers are commercial.
- A monthly budget the founders are comfortable with for outside tools. Without it, test 1 cannot fail on price.

Decision rule after the tests

- **Mysa passes test 1:** consider route C for intake, compliance and payments, keeping the FMS for approvals, staged payments and the budget feed.
- **Mysa fails, others pass:** route D. Build WhatsApp intake, connect Tally and a payout partner.
- **Everything fails on Tally and GST:** route A for longer, with a ring-fenced effort on Tally first.

The order of questions is right. The numbers behind them are mine. A founder or the accounts head should adjust the pass marks before the demos.

10. What this paper could not verify

> **Community voice is missing.** You asked for Reddit and other trusted sources. Reddit could not be opened by the tools used, and searches returned no threads on Tally, Zoho Books, procurement or accounts-payable automation. The review sites (G2, Capterra, TrustRadius, Gartner Peer Insights) returned access errors, so ratings come only from search snippets and most are unknown. **The absence of Reddit here is a limit of the tools, not a signal about any product.** A person with a browser should collect about three Reddit or CA-forum threads, plus the G2 and Capterra pages for Mysa, RazorpayX and Zoho Books, before the demos.

Other limits

- **Mostly vendor sources.** Many facts come from vendors' own pages or from competitors' comparison pages. They are marked ⚑ where that matters.
- **Research depth was uneven.** Four researchers each covered a slice with limited calls, and several products were read from search summaries, not full pages. Hypatos, Tipalti, Ramp, Airbase, Klippa, Moglix, Limble and Gupshup were not read from official pages.
- **Many cells are blank, not negative.** A dash on the scorecard means nothing we read said either way.
- **Third-party price figures** (Zycus, Zip, Coupa, Ariba, Rossum, provider fees) are estimates and sometimes disagree.
- **No independent accuracy test on Indian GST invoices** was found. The only benchmark seen is vendor-run.
- **Our own side** comes from a code check on 27 Oct. It shows what exists, not how it behaves under heavy use. The approvals screen is new and unapplied, and the invoice reader has not run on a real batch.
- **Dates:** prices and features change often, and Meta's and Tally's rules moved in 2026. Re-check before signing anything.
