Performance Marketing Review

Paid acquisition across Meta, LinkedIn & Google — benchmarked against industry standards

Markets: Mumbai, Noida, Bangalore

Scope: 4 locations × 3 paid channels | Total spend ₹12.68 L (≈ \$13.5k) | 234 leads | Blended CPL ₹5,421

*Confidential — internal management report
Date of analysis: June 2026*

1. Executive Summary

Across the review period, Autopilot Offices invested **₹12.68 lakh (≈ \$13.5k)** in paid acquisition across Meta, LinkedIn and Google, generating **234 leads** at a blended cost per lead (CPL) of **₹5,421**. Headline efficiency is healthy for a B2B managed-office product — but it masks a sharp imbalance in how budget is allocated versus where leads actually come from.

The one-line takeaway

Meta is the efficiency engine (38% of spend → 68% of leads), LinkedIn is over-funded relative to output (60% of spend → 32% of leads), and Noida — especially on LinkedIn — is absorbing budget at 3–7× the cost of every other location. Rebalancing toward Meta, scaling under-funded Bangalore, and fixing Noida would lift lead volume materially at the same total budget.

What's working

- **Meta is the most cost-efficient channel** — leads at ₹3,051 (vs the ₹1,000–3,000 benchmark) and 3.3× cheaper than LinkedIn, on a CPC of just ~₹45 (well inside the ₹15–80 range). Mumbai's Meta leads (₹2,688–2,709) sit squarely in benchmark.
- **Mumbai is a reliable volume core** — Lower Parel and Andheri produced the cheapest Meta leads (₹2,688–2,709) and 185 of 234 total leads.
- **Bangalore is the hidden gem** — best Meta CTR (1.42%, the only location inside the 0.8–1.5% Meta benchmark band), lowest Meta CPC (₹14.9), and a LinkedIn CPL (₹3,624) that beats the ₹4,000 floor — yet it received the least budget.

What needs attention

- **LinkedIn costs 3.3× more per lead than Meta** (₹10,128 vs ₹3,051) while consuming the largest share of budget. Justified only where lead quality / deal size is demonstrably higher — which is currently not being measured.
- **Noida is a money pit** — LinkedIn spent ₹4.04 L (53% of all LinkedIn budget) for just 19 leads at ₹21,246 each, while Google spent ₹23.7k for **zero** leads.
- **Meta creative is under-performing on engagement** — CTR of 0.72% sits below the 0.8–1.5% Meta benchmark band everywhere except Bangalore, signalling a creative/targeting refresh opportunity.
- **The Google search programme is effectively un-launched** — 100 clicks, 0 conversions, no tracking. CPC (₹237) is well within the ₹80–300 benchmark, so the channel is salvageable but needs proper setup before any verdict.

2. Performance Overview

The table below consolidates all four locations across the three channels. Meta and LinkedIn carry the programme; Google is a single small Noida test.

Channel / Location	Spend (₹)	Leads	CPL (₹)	CPC (₹)	CPM (₹)	CTR
META — Mumbai Lower Parel	2,57,390	95	2,709	61.5	341	0.55%
META — Mumbai Andheri	1,12,908	42	2,688	74.5	396	0.53%
META — Noida Skymark	52,681	8	6,585	57.3	317	0.55%
META — Bangalore	62,119	14	4,437	14.9	212	1.42%
Meta — Overall	4,85,098	159	3,051	45.0	323	0.72%
LINKEDIN — Mumbai Lower Parel	1,69,344	16	10,584	333	2,333	0.70%
LINKEDIN — Mumbai Andheri	1,57,581	32	4,924	225	1,922	0.86%
LINKEDIN — Noida Skymark	4,03,672	19	21,246	397	2,617	0.66%
LINKEDIN — Bangalore	28,993	8	3,624	230	1,781	0.77%
LinkedIn — Overall	7,59,589	75	10,128	323	2,337	0.72%
GOOGLE — Noida Skymark	23,718	0	n/a	237	15,791	6.66%
TOTAL / BLENDED	12,68,405	234	5,421	—	—	—

Figures from campaign dashboard. CPL = spend ÷ leads; CPC = spend ÷ clicks; CPM = spend ÷ impressions × 1,000; CTR = clicks ÷ impressions. USD conversions at ≈ ₹94/\$ (June 2026).

Budget vs. output: the core imbalance

The single most important pattern in the data is the gap between **share of spend** and **share of leads**. Meta punches far above its budget weight; LinkedIn does the opposite.

Figure 1 — Meta delivers 68% of leads on 38% of spend; LinkedIn delivers 32% of leads on 60% of spend.

Read this as

If a single rupee of Meta budget produces roughly 5× the leads of a rupee on LinkedIn (₹3,051 vs ₹10,128 CPL), the current 60/38 LinkedIn-heavy split is leaving lead volume on the table — unless LinkedIn leads convert to signed deals at a dramatically higher rate. That assumption needs to be validated, not presumed.

3. Performance vs. Industry Benchmarks

The benchmarks below are **India-specific ranges for the commercial real estate / managed-office context**, applied consistently across CPL, CTR and CPC. They represent the expected band for a qualified office-leasing campaign — not residential property-enquiry leads, which are cheaper and higher-volume but a different product. Each metric is judged against its own range below.

Benchmark ranges used — CPL: Google ₹1,500–4,000, Meta ₹1,000–3,000, LinkedIn ₹4,000–12,000 | CTR: Google 3–6%, Meta 0.8–1.5%, LinkedIn 0.6–1% | CPC: Google ₹80–300, Meta ₹15–80, LinkedIn ₹100–500.

Meta (Facebook / Instagram)

Metric	Autopilot	Benchmark	Verdict
CPC	₹45	₹15–80	In range — efficient
CPM	₹323	(context: India low)	Healthy / low
CTR	0.72%	0.8–1.5%	Below band (Bangalore 1.42% is in range)
CPL	₹3,051	₹1,000–3,000	At the ceiling; Mumbai in range, Noida & B'lore above

LinkedIn

Metric	Autopilot	Benchmark	Verdict
CPC	₹323	₹100–500	In range
CPM	₹2,337	(context: APAC mid)	In range
CTR	0.72%	0.6–1%	In range — good
CPL	₹10,128	₹4,000–12,000	In range (upper half); Noida ₹21k breaches it

LinkedIn's own metrics are respectable; the issue is not LinkedIn efficiency in isolation but its cost *relative to Meta* and the concentration of its budget in Noida.

Google Search

Metric	Autopilot	Benchmark	Verdict
CPC	₹237	₹80–300	In range
CTR	6.66%	3–6%	Above range — strong intent
Conv. rate	0.0%	(context: low for RE)	Failed to convert (100 clicks, 0 leads)
CPL	n/a	₹1,500–4,000	Undefined — no conversions captured

On Google, don't confuse “no result” with “no potential”

The clicks were bought within benchmark (₹237, inside the ₹80–300 range) and the CTR (6.66%) is above the 3–6% band. Zero leads from only 100 clicks on a single ad group most likely points to landing-page / conversion-tracking gaps, not a dead channel. This is a setup problem to fix, not a channel to abandon.

Figure 2 — CTR vs. benchmark range. Meta sits below its 0.8–1.5% band (except Bangalore, which lands inside it); LinkedIn is comfortably within 0.6–1%; Google clears the 3–6% band.

4. Cost-per-Lead Deep Dive

Plotting CPL by platform and location exposes exactly where money converts efficiently — and where it doesn't.

Figure 3 — Cost per lead vs. benchmark range, by platform and location. Shaded bands show the India CRE benchmark CPL range per platform (Meta ₹1–3k, Google ₹1.5–4k, LinkedIn ₹4–12k). Mumbai Meta sits in-band; LinkedIn is in-band except Noida (₹21.2k, ~1.8× the ceiling).

Channel verdicts

- **Meta — keep and scale.** Cheapest leads everywhere, strongest unit economics. The lever here is creative (lift CTR toward 1%+) and budget (it can absorb more).
- **LinkedIn — keep, but use surgically.** Right channel for enterprise / large-floor demand where decision-makers justify the premium. Wrong channel for broad volume, and badly mis-deployed in Noida.
- **Google — rebuild before judging.** High-intent search is ideal for “managed office in [micro-market]” queries. Needs conversion tracking, dedicated landing pages, and tighter keywords first.

5. Location Analysis

Figure 4 — Spend vs. leads by location. Noida draws the most combined spend for the fewest leads; Bangalore is starved despite strong efficiency.

Location scorecard

Location	Spend (₹)	Leads	Blended CPL	Assessment
Mumbai — Lower Parel	4,26,733	111	₹3,844	Volume leader. Meta excellent; LinkedIn weak (₹10.6k) — shift its budget to Meta.
Mumbai — Andheri	2,70,489	74	₹3,655	Most balanced location. Both channels productive. Hold / grow.
Noida — Skymark	4,80,071	27	₹17,780	Worst efficiency by far. 38% of total budget → 12% of leads. Diagnose demand & targeting; cut LinkedIn.
Bangalore	91,112	22	₹4,142	Best engagement & low CPCs, under-invested. Clear scale-up candidate.

Noida is the decision that matters most

Noida absorbed ₹4.80 L — more than any other location — and returned 27 leads at a blended ₹17,780, roughly 4–5× every other market. The LinkedIn line alone (₹4.04 L → 19 leads) is the single largest efficiency leak in the account. Before another rupee goes in, leadership should establish whether this reflects genuinely thin demand at the Skymark asset, a targeting/creative mismatch, or a tracking gap. Until then, Noida LinkedIn spend should be capped sharply.

6. Recommendations & Next Steps

The following actions are sequenced by impact and ease. The first three can be executed within the current total budget — they are reallocations, not increases.

Immediate (next 2–4 weeks)

1. **Cap and reallocate Noida LinkedIn.** Reduce the ₹4.04 L Noida LinkedIn line by 60–70% and redirect to Meta (Mumbai + Bangalore). At Meta's CPL this single move could add an estimated 80–100 incremental leads at the same spend.
2. **Scale Bangalore.** It posts the best CTR and lowest CPCs but the smallest budget. Increase Bangalore Meta spend 2–3× and test a controlled LinkedIn raise, monitoring CPL as volume grows.
3. **Shift Lower Parel's LinkedIn budget to Meta.** Lower Parel LinkedIn CPL (₹10,584) is 3.9× its Meta CPL (₹2,709) in the same micro-market — a clean, low-risk reallocation.

Near-term (4–8 weeks)

4. **Refresh Meta creative to lift CTR.** Target the 1.0%+ “good” threshold (Bangalore already clears it at 1.42%). Test new hooks, formats and lead-form friction; higher CTR also lowers CPM and CPL.
5. **Rebuild Google Search properly.** Install conversion tracking, build dedicated micro-market landing pages (“Managed office in Sector 62, Noida”), tighten to high-intent keywords, and re-launch as a measured pilot before scaling.
6. **Re-cast LinkedIn as an enterprise channel.** Use it deliberately for large-floor / GCC demand via job-function + seniority targeting and Lead-Gen Forms, not broad reach where Meta wins on cost.

Structural (the most important gap)

7. **Instrument the full funnel — measure beyond the lead.** CPL alone cannot tell you whether LinkedIn's premium is justified. Track lead → tour → signed deal by channel and location, and report **cost per qualified lead, cost per tour, and cost per deal**. For a managed-office business, a ₹10k LinkedIn lead that tours and signs can beat three ₹3k Meta leads that don't.
8. **Set a monthly benchmark review.** Bring CPL, CPC, CTR and conversion against these benchmarks into a standing dashboard so reallocation decisions are made on evidence, monthly, not retrospectively.

If only one thing is done

Move budget from Noida LinkedIn to Meta in Mumbai and Bangalore, and start measuring cost-per-deal — not just cost-per-lead. That combination improves volume immediately and tells you, for the first time, which channel actually fills offices.

Note: This review covers paid-media efficiency from the campaign dashboard. Incremental-lead estimates assume current Meta CPL holds as budget scales; actual results depend on audience saturation and creative performance and should be validated through phased testing.
